Greetings:

As a family practice physician, I see a large number of patients with pain from various causes. I have found the Alpha-Stim CS to be an excellent instrument in not only helping to control pain, but also in eliminating pain for long periods of time. As an example, I have a patient with arthritis that was having severe pain in her left knee, which was not controlled by medication. After one treatment, she was able to sleep through the night. After a second treatment she was pain free for several days, and following the third treatment she has required only occasional treatments, usually after straining or injuring the knee. She has now stopped taking her medicine and is doing well without it.

Sincerely

Theodore J. Cole, M.A., D.O., N.M.D., F.A.A.I.M.
