Dr. Dan Kirsch
Electromedical Products International, Inc.
2201 Garrett Morris Parkway
Mineral Wells, TX 76067-9484

Dear Dan:

I am writing this letter to inform you of some of the miracles I have seen with the use of the Alpha-Stim and grace of God. Over the last nine months, I have used the Alpha-Stim 100 and the SCS. Out of approximately 600 patients, some of the miracles I have seen include diabetic and peripheral neuropathy patients, acute and post-herpetic neuralgia, and thoracic radiculitis.

One of my patients had four low back surgeries which had failed. His last surgery was removal of hardware. He is in his early 40's. He also had a cervical failed neck and had been on disability for ten years. He was treated several times with the Alpha-Stim, as well as a series of cervical epidural steroid injections. After this second treatment with the use of the Alpha-Stim to the low back and treating, especially the scars, he had no back pain. This gentleman proceeded to play golf and baseball as a catcher. After several weeks, he had no neck pain or numbness of the upper extremities. After a month, he was completely pain free. He was so excited about the way he felt, he told everyone in his small community where he lives what had happened.

Each of my patients with peripheral neuropathies as well as edema to the lower extremities, had noticed within a 15 to 30 minute session using the probes followed by the clips, all had diuresed for the next several days. On their following visits, they also had improved circulation and color to the lower extremities.

I truly thank God, you, Dr. Smith and your staff at Electromedical for this wonderful technology, which has made a significant impact on my practice and in the way I treat patients. I have reduced my injections by over 50%.

Over the years, I have used various electrocurrent products and techniques and none of them compare to this technology.

Sincerely,

Michael K. Perry, CRNA, MS
Board Certified Pain Specialist, AAPM

I am so thankful that I can give hope to patients in pain.
